

# Policy Statement Energy

As ForFarmers we are focused on sustainability as one of our core values. In this we care about the environment and we are committed to protecting it. We care about energy use and are committed to energy efficiency. We aim to purchase energy efficient products and services wherever practicable and reduce greenhouse gas emissions and other environmental impacts.

Scope: energy used by ForFarmers UK during the sale, office support, manufacture, product storage and transport of our total feed solutions.

This is achieved by the following key elements:

1. **Monitor** – we ensure that we monitor and manage our energy use and efficiency throughout our processes to enable to reduce energy use and improve energy efficiency and giving adequate information, training and development for our employees to achieve the relevant knowledge and experience. Document and communicate procedures and implement a regular programme of energy audits.
2. **Compliance** – we are compliant with all relevant energy laws and regulations and the requirements of our energy assurance standards.
3. **Continuous improvement** – we strive towards continuous improvement of all processes relating to the performance of energy use and efficiency by committing organisational resources to energy management to establish, implement, maintain and improve an Energy Management System, the resulting energy performance and give high priority to energy efficiency investments, setting and reviewing energy objectives with realistic and achievable targets and by using defined KPIs. The Policy will be regularly reviewed and updated as necessary.

The continued success of this policy requires total commitment from everyone within our organisation and all our stakeholders.
