

As ForFarmers we are focused on sustainability as one of our core values, transforming low value materials into high quality food. In this we care about the environment and we are committed to protecting it. We aim to reduce energy consumption, prevent pollution, reduce waste, minimise consumption of natural resources, increase sustainable resource use, mitigate climate change and protect biodiversity and ecosystems.

Scope: Design, operate, maintain and secure our feed mill production and delivery operations.

This is achieved by the following key elements:

## **RELIABILITY**

We produce and deliver our products and services in an environmental responsible way for our customers.

## **MONITOR**

We ensure that we establish and maintain procedures and instructions to monitor and control our processes and we ensure adequate information is available by provision of training and development for our employees and contractors to achieve the relevant knowledge and experience. We document and communicate our procedures and implement a regular programme of environmental audits.

## **COMPLIANCE**

We are compliant with all relevant environmental laws and regulations and the requirements of our environmental accreditation standards.

## **CONTINUOUS IMPROVEMENT**

We strive towards continuous improvement of all processes relating to Environment by establishing and maintaining an Environmental Management System, setting objectives with realistic and achievable targets and by using defined KPIs.

The Policy will be regularly reviewed and updated as necessary.

The continued success of this policy requires total commitment from everyone within our organisation and all our stakeholders.
